

Recovery Act Signage

"We're also making it easier for Americans to see what projects are being funded with their money as part of our recovery. So in the weeks to come, the signs denoting these projects are going to bear the new emblem of the American Recovery and Reinvestment Act,"

"These emblems are symbols of our commitment to you, the American people — a commitment to investing your tax dollars wisely, to put Americans to work doing the work that needs to be done. So when you see them on projects that your tax dollars made possible, let it be a reminder that our government — your government — is doing its part to put the economy back on the road of recovery."

President Barack Obama, March 3, 2009

Sign Quality

Recovery signage is to be in place for the entire duration of the project. There are three ways to assure that signage will meet that requirement.

1. Begin with quality signage made from materials to withstand the weather.
2. Make certain that the signage has an anti-graffiti coating so that graffiti can be removed quickly and easily without damaging the sign.
3. Make certain that the signage is installed properly.

This is our promise...

Signage Requirements

ARRA signage requirements, must be coordinated with the requirements of the federal agencies, states, counties and cities.

Bella Graphics and Display has agreed to participate in the ARRA program by coordinating the signage requirements of the various agencies and designing and producing signage that meets those requirements.

Recovery Act Signage

4' x 8' or 4' x 4' Dibond with Anti-Graffiti Coating

This is the traditional "construction site sign." Use it to identify the project, the prime and sub contractors, how it was funded, include a four color picture or illustration of what the project will look like when it is complete, agency, state, county or city logos and more. The sign mounts on 4x4 posts or in a special frame (see sign holder)

Recovery Act Signage

Angle Iron Frame and Sign with Anti-Graffiti Coating

This sign is like those used in real estate sales. This angle iron sign has "sharp pointed legs that go into the ground. Excellent to use on the job site for directional signage. Use to direct deliveries, personnel, or to direct visitors to the construction office. Also perfect for sub contractor identification. Both prime and sub-contractors working on the job may need to be identified.

Recovery Act Signage

Round Aluminum Logo Sign with Anti-Graffiti Coating

This round sign the shape and official design of the ARRA logo. Use it to identify a Recovery Act Project. This stand alone sign can be easily attached to a metal angle iron pole. Our customers use these signs along highways and next to small bike or walking trails or in conjunction with residential neighborhood projects where large signs are not appropriate.

Recovery Act Signage

Greenleaf Eco-Shade Cloth (window graphics)

Renovating a large building with windows? Mesh signage attaches to the inside of windows and accomplishes several things. First it displays a printed message, illustration, logos and credits. It filters the sun light and keeps the room cooler so it saves energy. It provides some privacy yet it allows workers inside the building to see the street and it allows some light through. It is made from eco-friendly materials so it is better signage for the environment.

Recovery Act Signage

Greenleaf Eco-Mesh Outdoor Banners

Eco-Mesh outdoor banners are environmentally friendly and an extremely cost effective way to comply with signage requirements. Great for bridges and tall projects. Light and easy to install, the wind blows through the mesh. So this signage solution is durable and makes a very big visual impact with a minimal environmental impact.

Bella Graphics produced this 36 foot long banner with light weight Greenleaf Eco Mesh for GSA's 60th Anniversary. A large banner such as this will definitely comply with the requirement that a Recovery project sign be in full view of the public. Due to the light weight eco-friendly mesh fabric, it installs easier and greatly reduces the possibility of strain on the banner due to wind or other weather conditions

Recovery Act Signage

18 Ounce Outdoor Vinyl Banners

In some construction or renovation projects the configuration of the work site may make it necessary to install 'Recovery Compliant' vinyl banners whether it be on the side of a building, on a fence, parking lot, or some other area where a banner would be a better alternative to a more ridged sign.

Recovery Act Signage

13 Ounce Indoor Vinyl Banners

Indoor 13 Ounce vinyl banners work well for short term outdoor or longer term interior renovation projects. Excellent option in order to comply with Recovery sign standards in buildings where a Recovery renovation is underway but not obvious or viewable to the public.

Recovery Act Signage

PVC Signs with Anti-Graffiti Coating

PVC signs are a ridged substrate made with the same ingredients found in most weather durable vinyl siding and window materials. The versatility and strength of PVC allows for grommets to be inserted for hanging on the side of a building or fence or screwing into the side of a building or pole. PVC signs can be customized to most sizes and therefore used as directional, safety and informational use.

Recovery Act Signage

Logo Stickers with Anti-Graffiti Coating

A package of Recovery Act Project Sticker Signs. 6, 10 and 12 inch self-adhesive stickers with an anti-graffiti coating. Great to use on existing signs to catch up on the ARRA sign requirements without having to fully replace your signs.

Additional Custom packages and sizes available upon request.
